AI Summary

ESG stands for Environmental, Social, and Governance, which are three key factors used to evaluate the sustainability and ethical impact of investments. Environmental factors look at a company's impact on the environment, such as their carbon footprint, waste management practices, and efforts to reduce pollution. Social factors examine a company's relationship with its stakeholders, including employees, customers, and local communities. This includes factors such as human rights, labor practices, and diversity and inclusion initiatives. Finally, Governance factors assess a company's leadership, accountability, and transparency, including their board structure, executive compensation, and ethical business practices.

ESG investing has become increasingly popular in recent years as investors seek to align their investments with their values and support companies that are making positive impacts on the environment and society. It is also seen as a way to manage risk and potentially achieve long-term sustainable returns. Many companies have started to incorporate ESG factors into their business practices and reporting, recognizing the importance of sustainability and responsible investing.

Result descriptions would be here.

Sustainability report is off track across all interim targets [1] [2]. This plan was created on 02/13/2019, and was last updated 02/12/2023. The plan was originally approved by the Chief Sustainability Officer Richard Clarkson [3] [4] [5].

USE CASE

USSOCOM Commander's Dashboard

Commander's Dashboard Suite

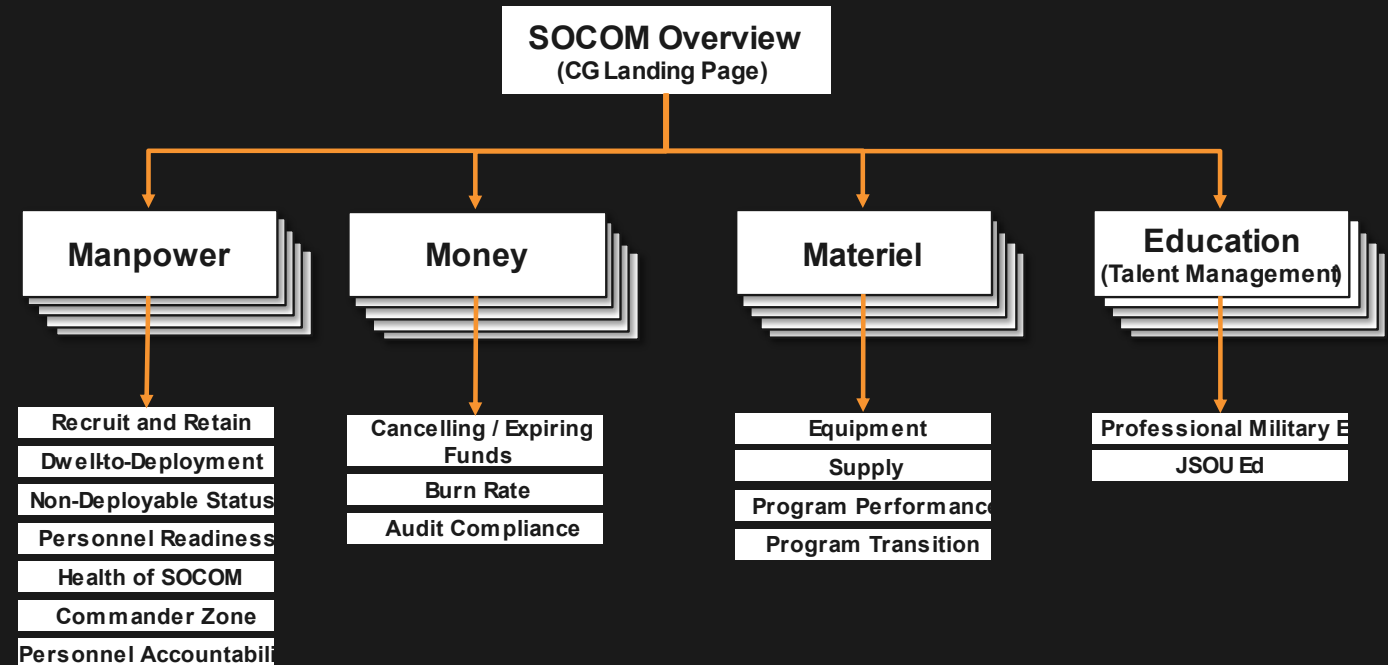

Enable decision makers and their staff at all echelons to develop insights rapidly across the entire enterprise

Mission

- **Command Visibility** to understand the health of an organization in real-time
- **Risk Mitigation** across command staff focus areas
- **Enterprise Alignment** with interconnected, operational dashboards

Challenge

1. Modernize user experiences to enable intuitive navigation across priorities
2. Define and connect the essential data for impactful analytics
3. Enable in-application goal creation and tracking to define success

CASE STUDY

Logistics Supportability Analysis

Joint Staff J4 Logistics Feasibility and Supportability Planning for Operational COAs

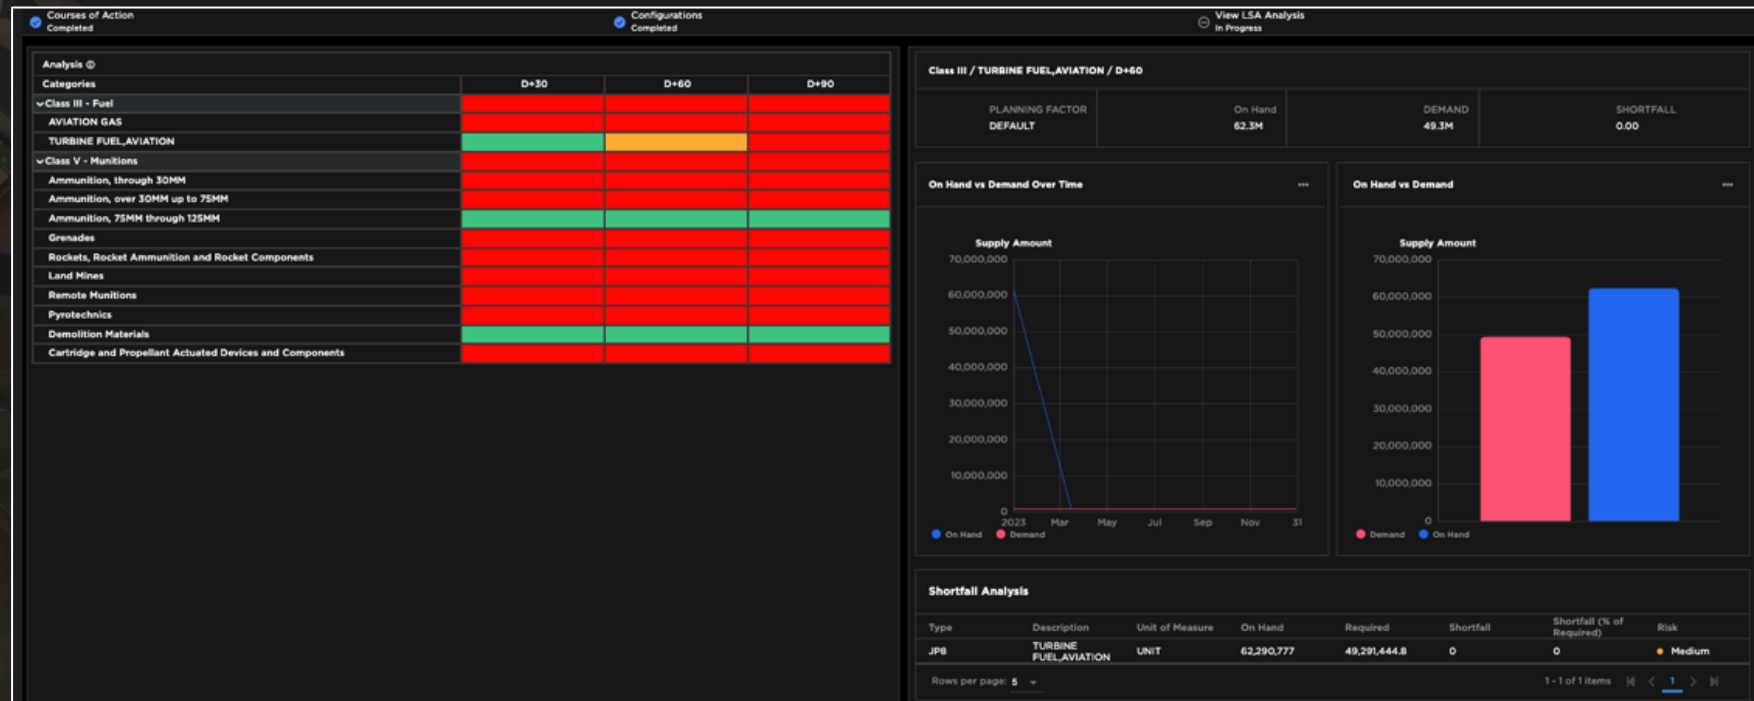

C3 AI Joint Staff J4 Logistics Support Analysis

Enables

Rapidly estimate and **forecast** operational mission sustainment requirements (e.g., bulk fuel, ammunition)

Evaluate and modify sustainment plans in **minutes** vice **weeks** to support multiple Operational Plans

USTRANSCOM

*Contested Logistics
Global Operations Center*

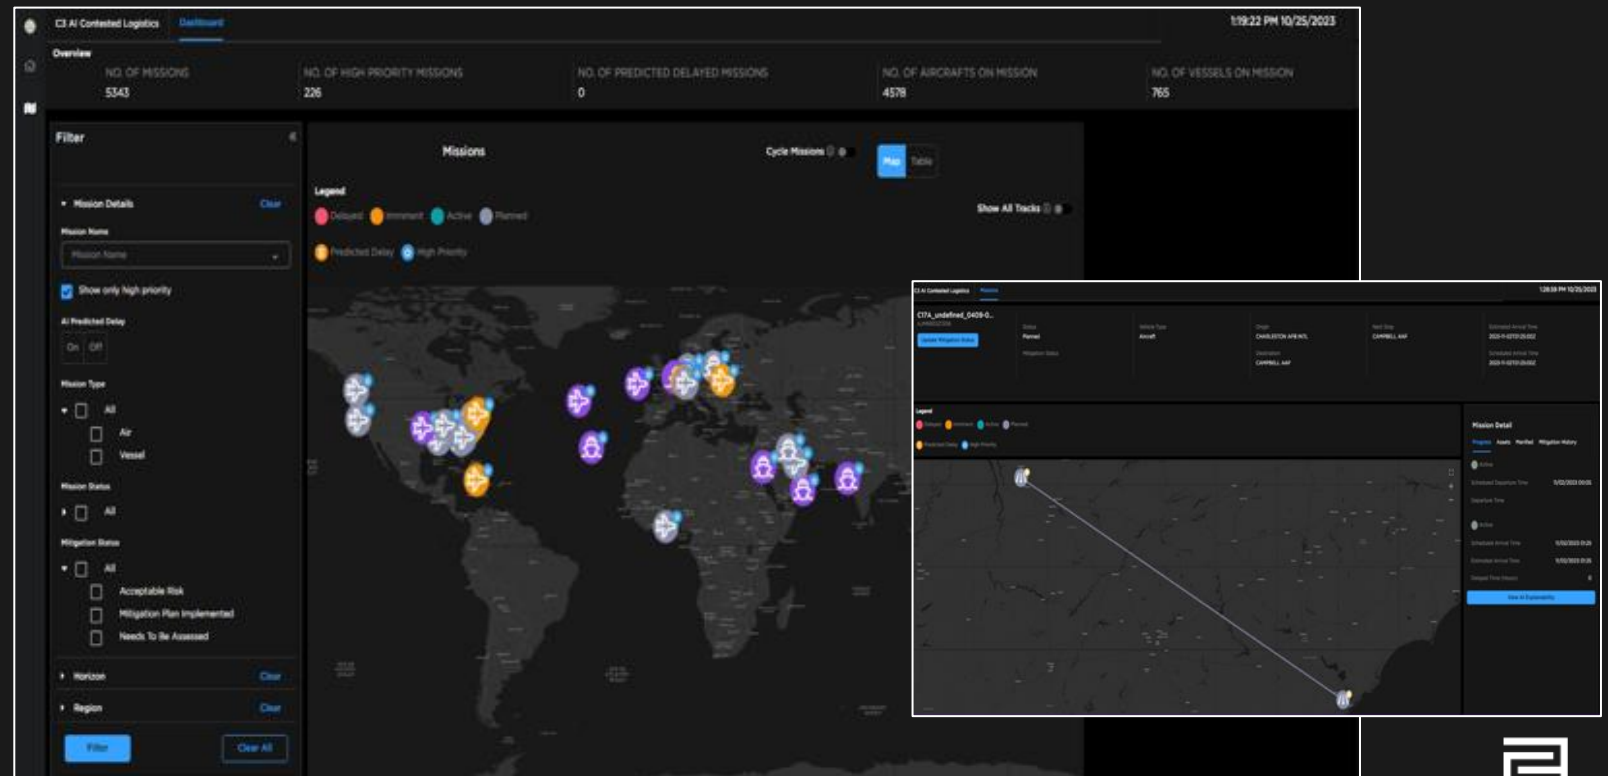

C3 AI Contested Logistics

USTRANSCOM

Enables Global insight into the status of troops and cargo movements via air and sea missions

Increased identification of mission delays by 200% from 1.7K to 4.2K

Capability provides the foundation for COA development and analysis

RDIM / RAVEN

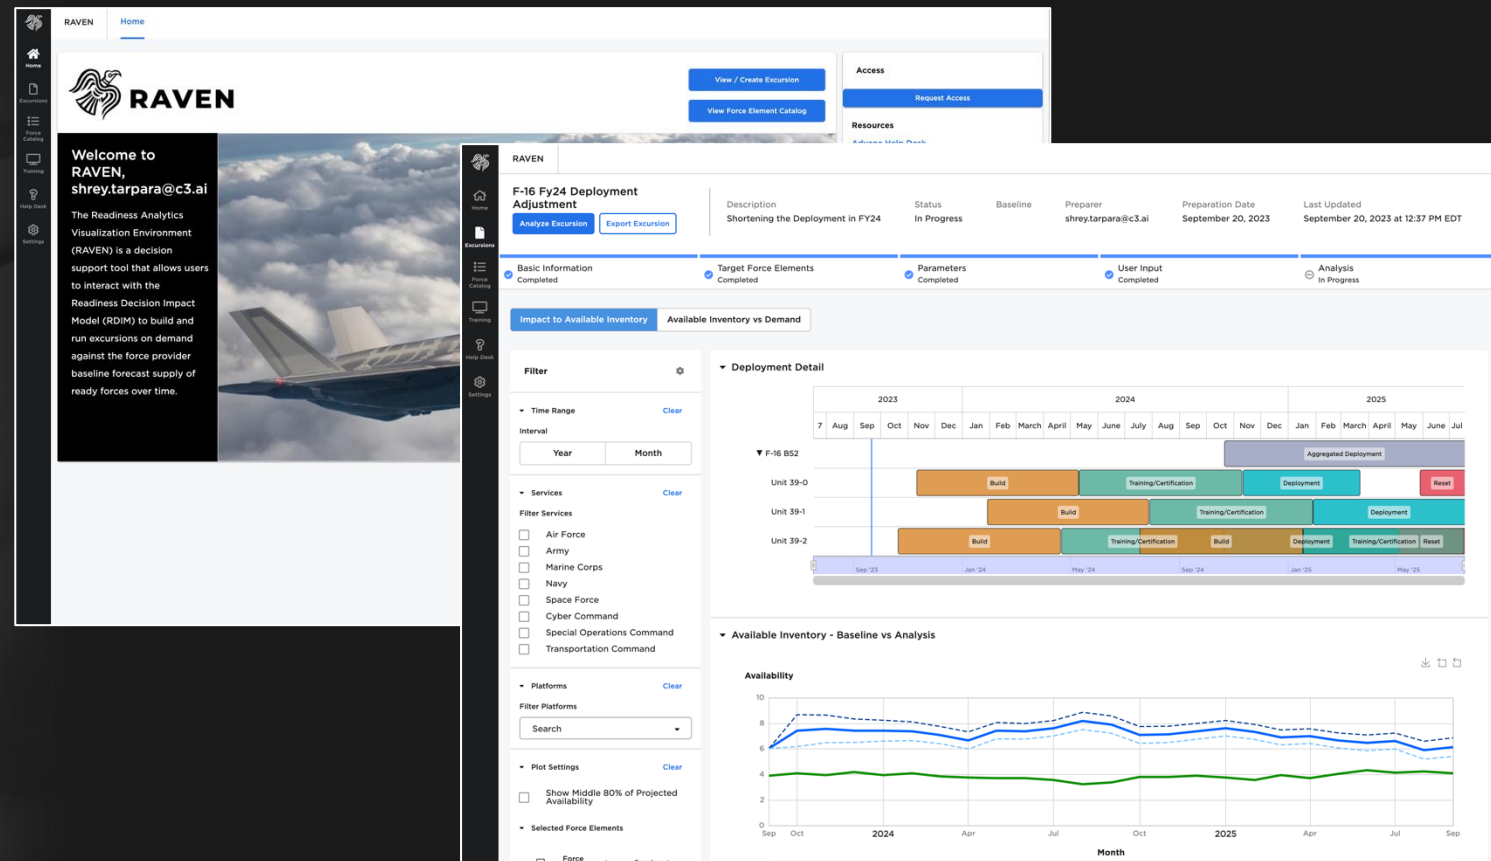

Strategic Force Readiness Forecasting

C3 AI's Readiness Analytics Visualization Environment (RAVEN)

Enables Simulation of global resource planning scenarios and readiness impacts
Generation of insights on how to respond to emerging global threats

C3 AI Contested Logistics for DLA J3 (Supply Class IX)

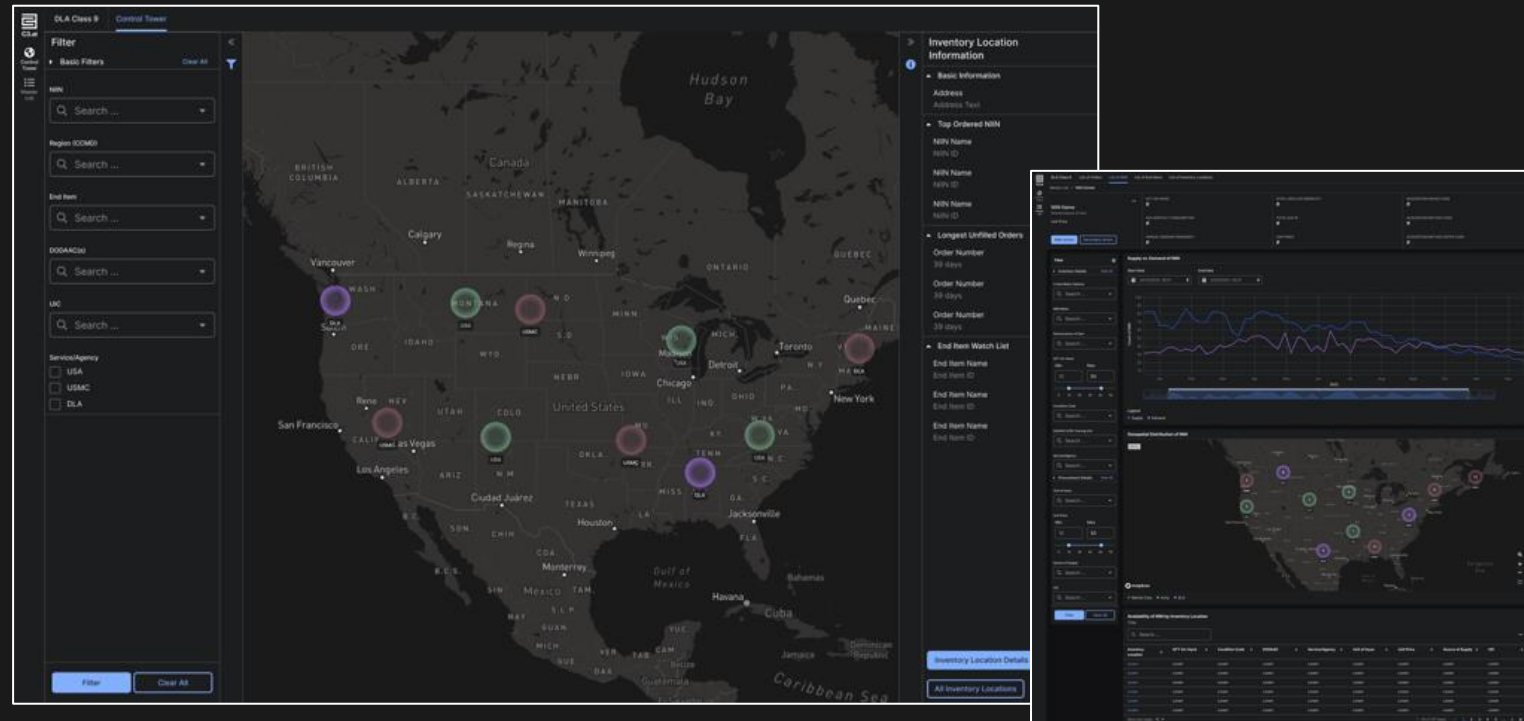

C3 AI Contested Logistics

DLA Class IX Supply

Enables **Instant** global visibility of **Class IX** supply part inventory across DLA, US Army, and US Marine Corps for the first time

Enables optimal part positioning and replacement

C3 AI Contested Logistics for DLA Energy (Supply Class III)

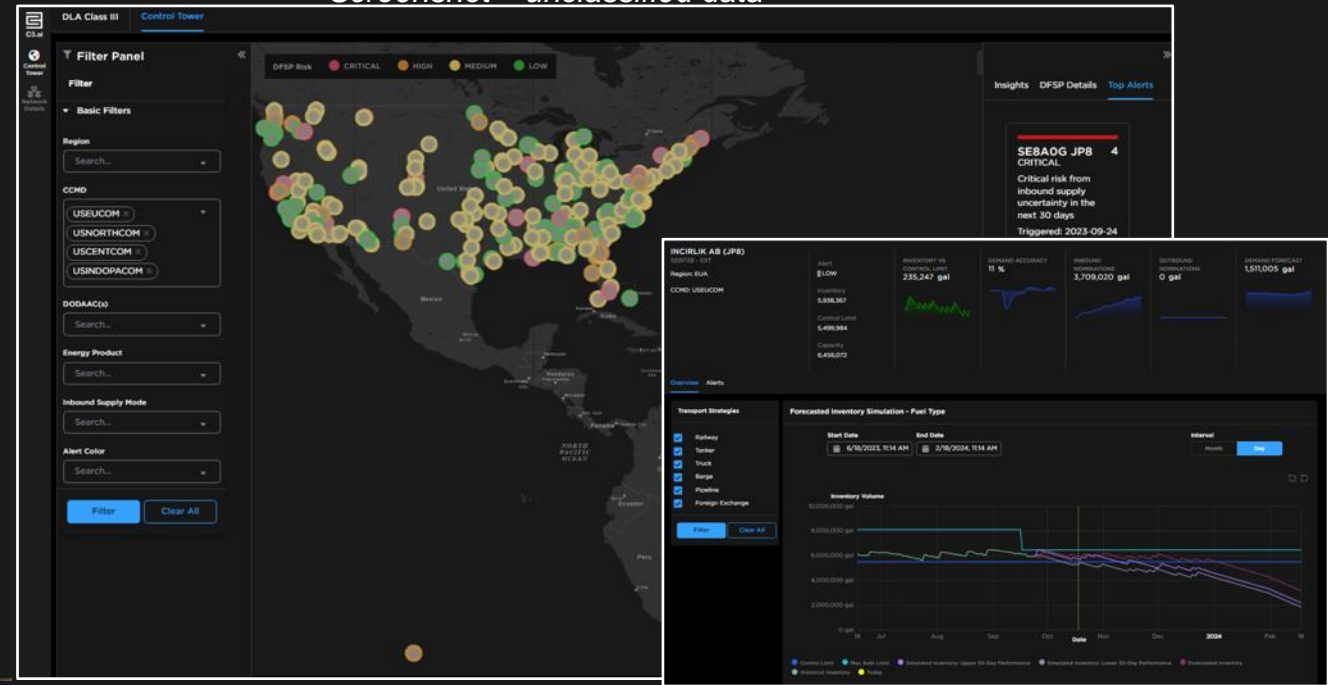

C3 AI Contested Logistics

DLA Energy (Class III) Supply Logistics

- Enables
- Instant global visibility of global petroleum, oil, and lubricants across 492 fuel depots
 - Forecasted fuel depot inventory levels and risks to enact mitigation plans
 - Increased risk lead time from 10 to 90 days and reduced false positives by 50%
